

TYPE 45 LCMS SELECTED

BT Global Services has selected e-learning specialist OutStart's Evolution product to provide a Learning Content Management System (LCMS) to support the Royal Navy's (RN) Type 45 training content development programme. The RN Type 45 Training Unit will develop, deploy and track the progress of over 50 e-learning courses, which will be delivered over the Defence Learning Portal (DLP), developed by BT.

RN Lieutenant Commander Simon Lees says, "the Type 45 Training Unit is delighted to be the first DLP user to engage with OutStart's LCMS. As the Maritime Warfare School embraces e-learning and the synthetic training paradigm, I anticipate that the significant advantages OutStart brings will drive even greater efficiencies into both the development and delivery of training for the RN."

The OutStart Evolution LCMS provides a single source development environment allowing content to be deployed in multiple locations and formats and yields greater value, use and portability of content, according to BT.

Peter Nicol is the OutStart's Vice President, Europe, Middle East and Africa (EMEA). "Our deep understanding of this sector, the proven success of our products and our effective relationship with BT ensured we were able to provide a solution that matched the needs of the RN precisely," says Nicol.
