OutStart supports humanitarian work

Mass High Tech: The Journal of New England Technology - March 13, 2006

Boston-based education software company, OutStart Inc., recently signed on as the newest member of LINGOs' (Learning for International Non-Governmental Organizations) partner organization by donating software product licenses and services to help improve training and service programs of member organizations, including Habitat for Humanity, Save the Children, Care and World Vision.

LINGOs is a consortium where learning professionals from member organizations, which include international humanitarian relief and development agencies, collaborate, share and learn. LINGOs also engages partner organizations, made up of companies such as OutStart and Microsoft Corp., which develop technology-assisted learning products, to provide expert help and support aimed at alleviating poverty and effectively responding to emergencies around the world.

OutStart Chief Learning Officer Michelle Bruce will be assisting LINGOs with learning and knowledge sharing technology strategy development to ensure successful implementation of the learning solutions. OutStart software powers formal and on-demand learning, knowledge sharing and community/expert collaboration solutions.

In addition, OutStart is providing LINGOs access to online training courses and OutStart's Customer Zone, which provides real-time, 24/7 access to knowledge, tools and support for its products. The software company has also promised LINGOs free upgrades and product enhancements.

Look for LINGOs' representatives at The eLearning Guild's annual conference set to be held next month at the Sheraton Boston Hotel.
